

Solar Bus Shelter Lighting

Solar powered LED lighting systems from Zeta give Municipalities and Townships the ability to install illuminated shelters wherever they are needed, including remote areas where power connection is not an option.

Combining the latest Solar and LED Technology along with the zeta Energy Management Controller, reliable safe shelter lighting is the perfect way to illuminate shelters in remote or developed areas.

Illuminating bus shelters at night increases passenger security and the perception of safety for public transport users. Choosing a solar option means instant installation, no traffic disruption and eliminates the cost and delays associated with traditional power connection

Zeta offers a customized service that ensures reliable year round operation for the specific project area.

The Benefits of Solar Bus Shelter Lighting

- Environmentally friendly
- Eliminates light pollution
- No delay for power connection
- No disruption to traffic or pedestrians
- Instant installation
- No utility bills
- High reliability
- LED lifetime 100,000 hours
- Illuminated waiting areas enhance public safety
- High threshold of Vandal resistance
